Atlas

01

©2026 · ATLASGO.CO.TZ

The operating system of the African school, and the learning layer that sits on top of it.

US$1,000,000 FOR 20%

ATLAS RUNS THE SCHOOL: FEES, ATTENDANCE, MARKS, PAYROLL AND THE MESSAGES THAT REACH PARENTS, ON WEB, ANDROID AND IOS. ON THAT FOUNDATION WE ARE BUILDING A PLANNING COPILOT FOR TEACHERS, A WEEKLY COMPANION FOR PARENTS, AND AN AI TUTOR WITH HOLIDAY EXAMS FOR EVERY STUDENT. BUILT IN TANZANIA, DESIGNED FOR EAST AND SOUTHERN AFRICA.

SEE IT LIVE · ATLASGO.CO.TZ

Schools are the distribution channel to every parent and every child.

LEARNING APPS IN AFRICA HAVE STRUGGLED TO REACH PARENTS AND GET PAID. SCHOOL SOFTWARE REACHES EVERY PARENT BUT STOPS AT THE OFFICE. ATLAS IS BUILT TO DO BOTH FROM ONE SYSTEM OF RECORD.

01

What we do

Atlas runs a private school end to end: fees on an immutable ledger, attendance, marks and report cards, national exam paperwork, payroll, and SMS to parents. Every role has its own view, on web and phone.

02

Where it goes

The same record that knows each child's marks powers a teacher planning copilot, a parent companion, and Atlas Learn: an AI tutor and holiday exams that parents pay for through the school invoice they already receive.

03

Where we are

25 modules built by the founder, four schools signed in four Tanzanian regions, zero outside capital. 5,289 private schools in Tanzania; about 57,000 across Tanzania, Kenya and Uganda.

04

The ask

US$1,000,000 for 20%. Twenty months to 250 paying schools, a paid learning pilot and a Kenya beachhead: the evidence a Series A needs.

A school is a business being run out of exercise books.

- **Nobody agrees on the arrears figure.** Fees live in a ledger book and three spreadsheets. Ask the bursar, the head and the board, and you get three numbers.
- **Parents hear about absence at the end of term.** By then the child has missed weeks and the school has lost the chance to act.
- **Report cards take weeks of evenings.** Marks are copied, totalled and ranked by hand, every term, for every stream.
- **Payroll and PAYE are computed manually.** The mistake is found by the tax authority, not by the school.
- **The software that exists bills per student** and sells messaging and AI as extras, so a growing school pays more every year.

PRIVATE SCHOOLS ACROSS THE REGION COLLECT FEES WORTH BILLIONS OF SHILLINGS A YEAR AND ACCOUNT FOR ALMOST NONE OF IT IN A SYSTEM. THE HEAD TEACHER CANNOT SEE TODAY WHAT THE SCHOOL IS OWED.

Learning stops at the classroom door.

THE SCHOOL RUNS ON PAPER, SO THE PEOPLE AROUND THE CHILD WORK BLIND: THE TEACHER PLANS ALONE, THE PARENT FINDS OUT TOO LATE, AND THE HOLIDAYS ARE LOST.

78%

TEACHERS PLAN ALONE

Tanzania moved to a competency based curriculum in 2024. In one 2025 study, 78% of lesson plans examined lacked its essential qualities. Teachers write schemes of work and question papers by hand, at night.

1×

A TERM, FOR THE PARENT

Most parents see results once, on the report card. By then a weak subject has had a whole term to get weaker, and the parent has no idea what to do about it.

~3

MONTHS OF HOLIDAY A YEAR

Learning stops unless a family can pay for holiday tuition. Parents already spend on it. Most of it is unstructured and nobody measures whether it worked.

0

CHANNEL FOR LEARNING APPS

Edtech that sells straight to parents has to win millions of families one at a time. Reach has been possible; getting paid has been the hard part.

Learning apps had the content and no channel. School software has the channel.

THE SYSTEM THAT RUNS A SCHOOL ALREADY HOLDS THE FOUR THINGS A LEARNING BUSINESS HAS NEVER BEEN ABLE TO BUY: THE CHILD'S REAL MARKS, A TRUSTED RELATIONSHIP WITH THE PARENT, A WORKING WAY TO BILL THEM, AND THE TEACHER'S ATTENTION EVERY DAY.

It knows the child

Every mark, every absence, every term, by subject. A tutor that starts from the child's actual weak topics instead of a placement quiz.

It already reaches the parent

The parent's phone number is on file and the school texts them already. Basic phones included.

It already bills the parent

Atlas Learn is one more line on a fee invoice the parent already pays, by mobile money, into a ledger we already run.

The school is on our side

The school keeps 20% of every Learn subscription. Its best salesperson is the head teacher at the parents' meeting.

One record. Four products built on top of it.

EACH LAYER READS THE SAME DATA, SO EACH ONE MAKES THE NEXT CHEAPER TO BUILD AND EASIER TO SELL. THE FIRST IS BUILT. THE OTHER THREE ARE WHERE THIS ROUND GOES.

01 School OS

Fees and immutable ledger, attendance, marks and report cards, national exam exports, timetable, payroll and PAYE, hostel, transport, library, clinic, parent SMS, and an AI assistant across all of it.

BUILT · IN PILOT

PAID BY THE SCHOOL

02 Teacher Copilot

Schemes of work, lesson plans, question papers and marking guides drafted against the national syllabus for the teacher's own class, then marks fed straight back into the record.

MONTHS 1 TO 6

INCLUDED, DRIVES RENEWAL

03 Parent Companion

A weekly digest by app or SMS: attendance, new marks, fees due, and one concrete thing to practise at home. Portal and parent SMS are already built.

MONTHS 4 TO 9

INCLUDED, DRIVES LEARN

04 Atlas Learn

An AI tutor that starts from the child's real marks, and holiday exams and mock national exams, marked instantly, with results shared with the parent and the class teacher.

PILOT, MONTH 9

PAID BY THE PARENT

The hard, boring part is already done.

ONE FOUNDER, NINE MONTHS OF BUILDING AFTER EIGHTEEN MONTHS IN SCHOOLS. THE SCHOOL OS IS COMPLETE AND PILOTING WITH FOUR SCHOOLS. PRODUCTION HOSTING, MONITORING AND RESTORE DRILLS ARE FUNDED IN THE FIRST QUARTER.

25
MODULES

73
DATABASE TABLES

219
DATABASE FUNCTIONS

28
AI READ TOOLS

3
WEB, ANDROID, IOS

25
END TO END TEST SUITES

MONEY YOU CAN AUDIT

Double entry ledger. Payments cannot be edited, only reversed, and every report reconciles to the ledger or refuses to run.

ISOLATION PER SCHOOL

Every query is scoped to one school on the server and enforced again by row level security in the database.

BUILT FOR THE REGION

National exam combinations and candidate exports, PAYE bands as data, mobile money, and SMS for parents without smartphones.

TEACHER COPILOT

Sunday night planning, done in ten minutes.

- **Scheme of work for the term**, mapped to the national syllabus for that subject and class.
- **Lesson plans in the competency format** inspectors now ask for, editable before use.
- **Question papers and marking guides**, then marks go straight into Atlas, so report cards build themselves.
- **The class's weak topics**, from real marks, so revision goes where it is needed.

The teacher stays the author. Atlas drafts, the teacher edits and confirms. Nothing reaches a child unreviewed.

PARENT COMPANION

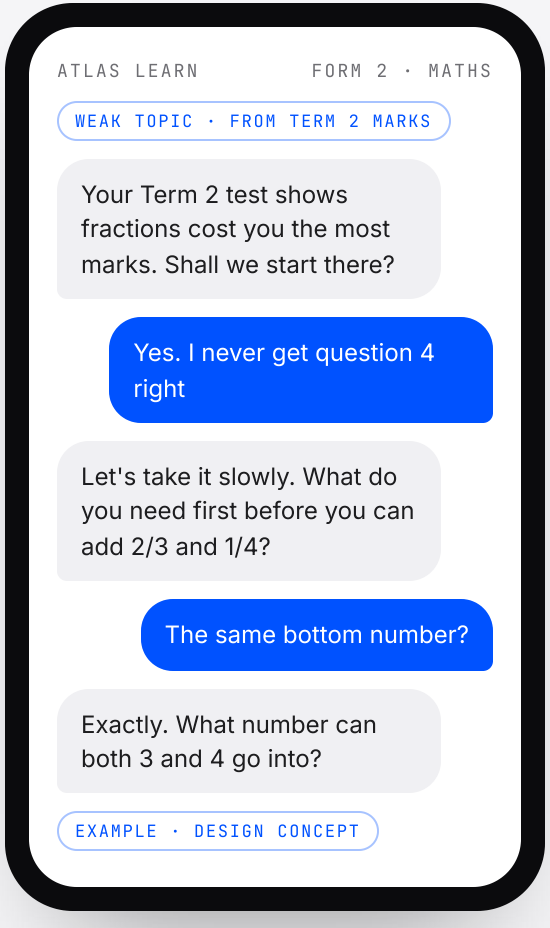

The parent hears weekly, not once a term.

- **A Friday digest** by app or SMS: days attended, new marks, fees due.
- **One thing to do this weekend**, drawn from the child's weakest topic, written for a parent who is not a teacher.
- **Pay from the message** by mobile money, reconciled to the school's ledger automatically.
- **The bridge to Learn.** The digest is where a parent first sees the tutor and the holiday exam pack.

Built today: parent portal, guardian SMS for fees, absence and results, and a mobile parent view.

A tutor that has read the report card.

- **Holiday exam packs.** December and June revision papers per class and subject, marked instantly, results to parent and teacher.
- **Mock national exams** for Standard Seven, Form Two and Form Four, timed, with a topic by topic breakdown.
- **An AI tutor** that starts from the child's weakest topics, explains step by step and asks back rather than giving answers away.

TZS 30k

PER LEARNER, PER YEAR · ABOUT US$11

Billed by the school on the fee invoice. The school keeps 20%. Holiday packs can also be bought on their own.

SAFE BY CONSTRUCTION

The tutor reaches only syllabus content and that child's own record, through the same permission checked tools as the School OS. No open web chat. Every session is visible to the parent.

The school pays for the system. The system sells the learning.

- **Customer acquisition is paid once.** A rep sells one school and reaches hundreds of families with it. Learn has no separate marketing budget.
- **Data compounds.** Every term of marks makes the tutor more precise and the school harder to move.
- **Incentives line up.** The school earns from Learn, so renewal becomes the school's interest as well as ours.

AI native, not AI assisted.

MOST SCHOOL SOFTWARE ADDS A CHATBOT ON TOP. ATLAS WAS DESIGNED AROUND THE AGENT FROM THE FIRST MIGRATION, WHICH IS WHY IT CAN BE TRUSTED WITH A SCHOOL'S MONEY AND ITS CHILDREN.

01

It cannot invent a number

Money figures come from reporting functions reconciled to the ledger. The model is never allowed to do the arithmetic.

02

It cannot leak

The model reaches data only through a fixed tool catalogue, permission checked on every call, with the school identity taken from the server.

03

It cannot act alone

Every change runs propose, confirm, execute. A person confirms, and the confirm step is not reachable by the model.

04

It owns the record

A learning app can copy content. It cannot copy five years of a school's ledger, marks and parent relationships.

Four things became true at the same time.

EACH ON ITS OWN IS A TREND. TOGETHER THEY OPEN A WINDOW THAT THE NEXT THREE TO FIVE YEARS WILL CLOSE.

01 · AI BECAME CHEAP ENOUGH TO INCLUDE

A tutor or a planning assistant inside a school plan would have broken the margin two years ago. Today the whole AI bill for a school is under US$40 a year.

02 · THE CURRICULUM CHANGED

Tanzania's competency based curriculum arrived in 2024 and Kenya is mid way through its own reform. Every teacher has to replan, and most have no help doing it.

03 · PARENTS CAN BE REACHED AND CAN PAY

Mobile money and near universal phone ownership mean a parent can hear what is owed, and pay it, in the same hour.

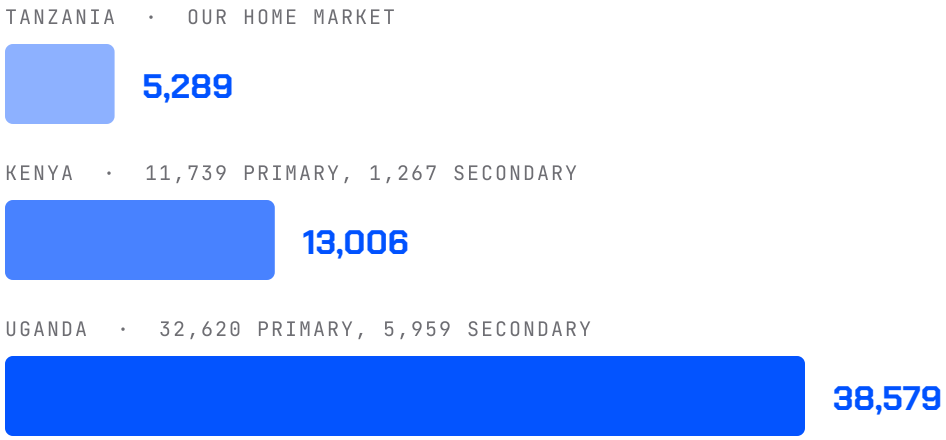

04 · THE MARKET IS STILL UNSOLD

In Tanzania the incumbent has about 490 schools after a decade, under one in ten. In Kenya, Zeraki proved schools adopt fast: from 400 to 5,800 schools in three years.

56,874 private schools in our first three countries.

BEFORE A SINGLE PUBLIC SCHOOL, AND BEFORE RWANDA, ZAMBIA OR MALAWI. TWO ENGINES ON THE SAME SCHOOLS: THE SCHOOL PAYS FOR THE SYSTEM, FAMILIES PAY FOR THE LEARNING.

PRIVATE SCHOOLS, BY COUNTRY

ANNUAL MARKET, THREE COUNTRIES

ENGINE	BASIS	PER YEAR
School OS	56,874 schools × ~US$850	**US$48M**
Atlas Learn	14.2M learners × US$11	**US$156M**
Total addressable		**US$204M**
Our year five plan	3,600 schools, 20% attach	**US$5.9M**

Learners assume 250 per private school. Upside not counted: public schools (Zeraki serves over half of Kenya's public secondaries), Rwanda, Zambia, Malawi. Sources: Kenya Ministry of Education 2023, Uganda Education Statistical Abstract 2025, owner research for Tanzania.

Win Tanzania. Then the region, one country at a time.

THE PRODUCT IS COUNTRY AGNOSTIC BY DESIGN: THE CURRICULUM, EXAM FORMATS, TAX BANDS AND GRADING SCALES ARE DATA, NOT CODE. A NEW COUNTRY IS A CONTENT AND SALES PROJECT, NOT A REBUILD.

PHASE 1 · 2026 TO 2028

Tanzania

Dar es Salaam, Arusha, Mwanza, Dodoma, Zanzibar. Field reps living where they sell. All four layers launched here first. Target: 300 schools by end of year two.

PHASE 2 · 2028 TO 2029

Kenya & Uganda

Kenya enters through premium private schools and Learn, not a head on fight with Zeraki on price. Uganda's 38,000 private schools are the volume prize. Kenya groundwork starts in this round.

PHASE 3 · 2030 ONWARD

Rwanda, Zambia, Malawi

English medium systems with growing private sectors and mobile money. Not in our financial model. Partner led entry, priced in local currency.

WHAT TRAVELS UNCHANGED: LEDGER, ROLES, APPS, AI SAFETY MODEL, SMS

WHAT WE ADD PER COUNTRY: SYLLABUS, EXAMS, TAX, PAYMENT RAILS

Everyone owns one piece. Nobody joins them up.

WHO	RUNS THE SCHOOL OFFICE	REACHES EVERY PARENT	PLANS WITH THE TEACHER	TUTORS THE STUDENT	KNOWS EACH CHILD'S MARKS	BILLS THROUGH THE SCHOOL

CHECK IT YOURSELF

The public site and a no login product tour are live at **atlasgo.co.tz** and **atlasgo.co.tz/tour**. A full demo school is available on request.

SCHOOL	WHERE
Tumaini Junior Academy	Karatu, Arusha
East Africa School	Mikocheni, Dar es Salaam
Green Valley School	Arusha
Trifonia Academy	Zanzibar

WHAT THE FIRST FOUR TAUGHT US

- **The demo is the pitch.** Importing a school's own spreadsheet and showing its real arrears figure closes the room.
- **Bursar and head both have to say yes.** We sell to both in the same meeting.
- **Parents ask about learning first.** "How is my child doing?" comes before "what do I owe?", which is why Learn sits on this platform.

Schools buy from people. So we send people, region by region.

TANZANIAN SCHOOLS DO NOT BUY FROM A WEBSITE. THEY BUY FROM SOMEONE WHO SAT WITH THE BURSAR AND IMPORTED LAST TERM'S SPREADSHEET IN FRONT OF THEM.

5

FIELD REPS IN YEAR ONE

Living in the regions they sell in. Paid a base plus commission on cash collected, not on signatures.

1 to 2

SCHOOLS PER REP PER MONTH

One a month in the first half while reference schools are built, two a month once each region has them.

~$500

TARGET COST TO WIN A SCHOOL

Against about US$760 of first year gross profit, collected up front. Learn sales on top cost nothing extra.

Networks, not single schools

Owner associations, dioceses and school groups decide for several campuses at once.

Reference led inside a region

Head teachers talk. One signed school in Karatu is an introduction to the next five.

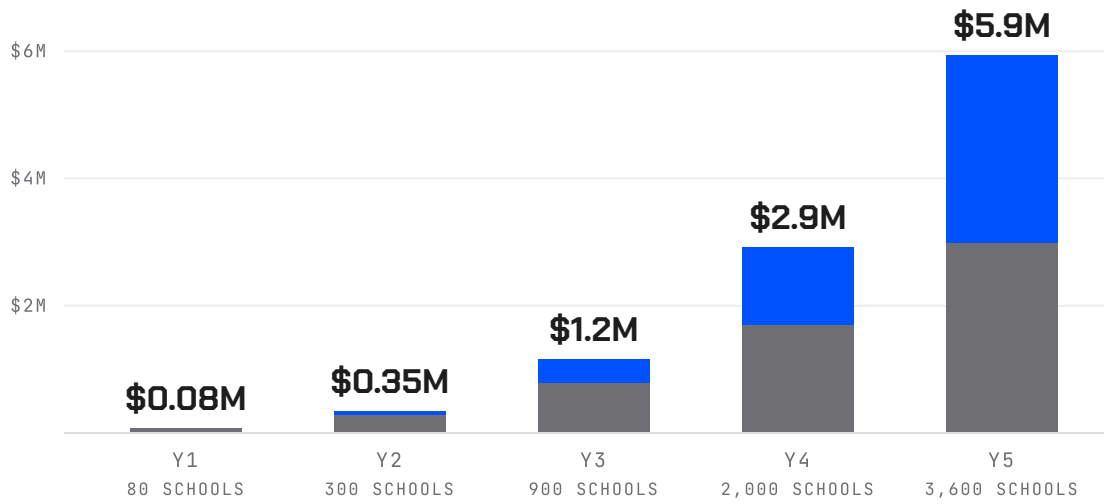

Learn is sold by the school

At the parents' meeting, by the head teacher, because the school keeps 20%.

$5.9M of annual revenue by year five. EBITDA positive.

BUILT BOTTOM UP FROM REPS AND SCHOOLS, NOT FROM MARKET SHARE. KENYA FROM YEAR THREE, UGANDA FROM YEAR FOUR, FUNDED BY A SERIES A AROUND MONTH EIGHTEEN.

ANNUAL RECURRING REVENUE AT YEAR END, US$ · ■ SCHOOL OS ■ LEARN

US$ MILLIONS	Y1	Y2	Y3	Y4	Y5
Schools at year end	80	300	900	2,000	3,600
Countries	1	1	2	3	3
Paying learners	pilot	7k	40k	135k	324k
School OS revenue	0.08	0.28	0.79	1.70	2.99
Learn revenue	0.00	0.06	0.37	1.23	2.95
Total billed	**0.08**	**0.35**	**1.16**	**2.93**	**5.93**
Operating cost	0.55	0.85	1.60	2.60	3.60
EBITDA	**-0.49**	**-0.59**	**-0.73**	**-0.40**	**+0.85**

Learn take up 5% in Y2 rising to 20% by Y5, of 450 learners a school. School price falls to ~US$830 blended as cheaper markets join. Direct costs 25% of billings. Billed annually in advance, so billings track cash.

US$1,000,000. Twenty months. One job: earn the Series A.

SEVEN DOLLARS IN TEN GO TO SELLING, ONBOARDING AND BUILDING THE LEARNING LAYERS. IF THE SERIES A TAKES LONGER, TANZANIA ALONE REACHES BREAK EVEN AT ABOUT 450 SCHOOLS.

MONTHS 1 TO 6

40

PAYING SCHOOLS

- Production hosting, monitoring and a full restore drill
- Teacher Copilot live in every school
- Five reps, two onboarding specialists, senior engineer hired

MONTHS 7 TO 12

100

PAYING SCHOOLS

- Parent Companion weekly digest live
- Learn pilot in 15 schools over the December holiday
- First paid holiday exam packs sold

MONTHS 13 TO 20

250

PAYING SCHOOLS

- About US$300k of annual revenue
- Learn take up measured, target 5% or more
- Ten pilot schools in Kenya; 90% or better renewal; Series A

FOUNDER

Africanus Panga

- **Eighteen months inside schools** before writing a line of code.
- **Built all 25 modules**, the three apps and the AI safety model himself, in nine months.
- **Sold the first four schools** in four regions, with no team and no references.

One founder who can build and sell means the product moved at a fraction of the usual cost. It is also our largest risk, which is why the first hires below are funded before anything else.

FUNDED BY THIS ROUND, IN ORDER

ROLE	WHY IT COMES FIRST
Senior engineer, CTO track	Removes key person risk; owns production
Head of sales, Tanzania	Turns founder selling into a repeatable team
Head of learning	Experienced Tanzanian teacher; owns syllabus content
Onboarding specialists (2)	Onboarding is the retention plan
Kenya lead, month 12	Local hire, local network, ten pilots

US$1,000,000 for 20%.

$5M
POST MONEY VALUATION

20
MONTHS OF RUNWAY

250
SCHOOLS AT SERIES A

WHAT 20% COULD BE WORTH AT THE END OF YEAR FIVE

SCENARIO	REVENUE	MULTIPLE	YOUR STAKE	RETURN
Tanzania only 1,000 schools, Learn at 10%, no further raise	$1.4M	4×	20%	1.1×
The plan 3,600 schools, three countries, Learn at 20%	$5.9M	6×	16%	5.7×
Regional platform 6,000 schools by year six, Learn at 35%	$13.6M	8×	14%	14.8×

Stake after dilution: none if no further round, a Series A of 20% in the plan, and a Series B of 15% on top in the regional case. Multiples are revenue multiples, set conservatively for African software. Illustrative, not a promise.

- **Equity, on standard terms.** A priced round or a SAFE with a US$5M post money cap, whichever the lead prefers. 1× non participating preference.
- **Open to tranches.** For example US$400k at close and US$600k at 60 paying schools, so the valuation is earned in front of you.
- **Information you can rely on.** Monthly schools, billings and cash in writing; quarterly board meeting; a board seat or observer for the lead.
- **Pro rata rights** in the Series A.

What could go wrong, and what we do about it.

EVERY ONE OF THESE IS A QUESTION YOU WERE GOING TO ASK. WE WOULD RATHER ANSWER IT ON OUR OWN SLIDE.

RISK	OUR ANSWER
Four schools is early	All four were closed founder led, in four regions, with no references. Milestones are monthly and checkable, and we are open to tranching against them.
Parents may not pay for Learn	Families already pay for holiday tuition. We pilot over one December holiday before scaling, and the plan works on the School OS alone in Tanzania.
AI with children	No open chat. The tutor reaches only syllabus content and the child's own record, sessions are visible to parents, and content is reviewed by our learning team.
Solo founder	The first hire is a senior engineer. The codebase carries written conventions, migration history and 25 end to end suites, so new engineers are productive in days.
Production readiness	Hosting, monitoring, backups and a restore drill are the first quarter's work, before the sales push scales.
Data protection, currency	Registration and agreements under Tanzania's 2022 data protection law are funded up front. Revenue is in shillings; we hold dollars and convert as we spend.

Atlas

Every school runs on it. Every child learns on it.
